

Installing LAMP

LAMP is Linux + Apache server + MySQL + PHP

1. Install Apache

Run the following commands in a terminal window:

- `sudo apt-get update`
- `sudo apt-get install apache2`

To check to see if everything has install successfully type `http://localhost` in to your web browser

2. Install MySQL

Run the following commands in a terminal window:

- `sudo apt-get install mysql-server php5-mysql`

To setup the MySQL, run the `sudo mysql_install_db` command

3. Install PHP

Run the following commands in a terminal window:

- `sudo apt-get install php5 libapache2-mod-php5 php5-mcrypt`
